

ADVANCED INVENTORY COUNT

for Microsoft Dynamics 365 Business Central

Simplify inventory counts with comprehensive data entry, reconciliation, posting and analysis tools.

Advanced Inventory Count simplifies inventory and cycle counts with comprehensive data entry, reconciliation, posting, and analysis tools. You can significantly reduce count times and increase productivity by streamlining the counting process, including flexible count sheet generation, multi-user count entry, and integration with inventory barcodes.

With robust reporting and reconciliation features, you can ensure accurate inventory accounting and finish inventory counts sooner, freeing up time for other important tasks. Say goodbye to long, exhausting inventory counts and go home earlier with Advanced Inventory Count.

Efficient Inventory Management for Accuracy and Time Savings

- **Efficient Inventory Management:** Streamline counting for accuracy and time savings.
- **Accurate Inventory Tracking:** Ensure all inventory, including WIP, reducing discrepancies.
- **Faster Data Entry:** Simultaneously enable multiple users for efficiency.
- **Customized Counting:** Tailor sheets for precise counting.
- **Quick Discrepancy Resolution:** Rapidly identify and resolve discrepancies.
- **Seamless Barcode Integration:** Integrate with barcode systems for faster counting.
- **Improved Item Tracking:** Automatically reconcile lot and serial numbers to reduce errors.
- **Adaptable Locations:** Accommodate various warehouse setups for efficiency.

Typical Users:

Inventory Managers: Oversee inventory levels and discrepancies.

Warehouse Supervisors: Coordinate inventory counts and operations.

Logistics Managers: Manage goods movement and storage.

Purchasing Managers: Monitor and procure stock.

Production Managers: Track raw materials, WIP, and finished goods.

Supply Chain Analysts: Analyze inventory data and improve supply chain efficiency.

Warehouse Staff: Conduct physical counts and enter data.

Quality Control Managers: Ensure product traceability and standards.

Financial Controllers: Review inventory valuation and track adjustments for reporting.

ADVANCED INVENTORY COUNT

Simplified Count Process:

Comprehensive data entry, reconciliation, posting, and analysis tools simplify inventory counts and cycle counts.

Multi-User Count Entry:

Speed up manual data entry by allowing multiple users to enter count data simultaneously, regardless of the number of count sheets, data entry staff, or count staff.

Flexible Count Sheet Generation:

Create count sheets that match how your company counts inventory, with tools available to quickly and easily configure count sheets to simplify the inventory count process.

Inventory Barcode Integration:

Integrates with the Mobile Warehouse Data Collection app and other external data collection systems to automate inventory counts with barcode scanning, improving count efficiency.

Supports All Location Configurations:

Whether you have bins enabled or not or even use "advanced warehousing," the module will make your next count significantly more efficient, reconciling by lot and serial number.

Powerful Reporting and Reconciliation Features:

Identify obsolete inventory, items with improper planning parameters, and the financial impact of those issues, and quickly locate count errors with powerful reporting and reconciliation features.

WIP Counting:

Automatically reconcile and post lot or serial number discrepancies, identify and manage WIP, and reconcile it with other counted inventory, and posts the appropriate consumption and inventory adjustment entries.

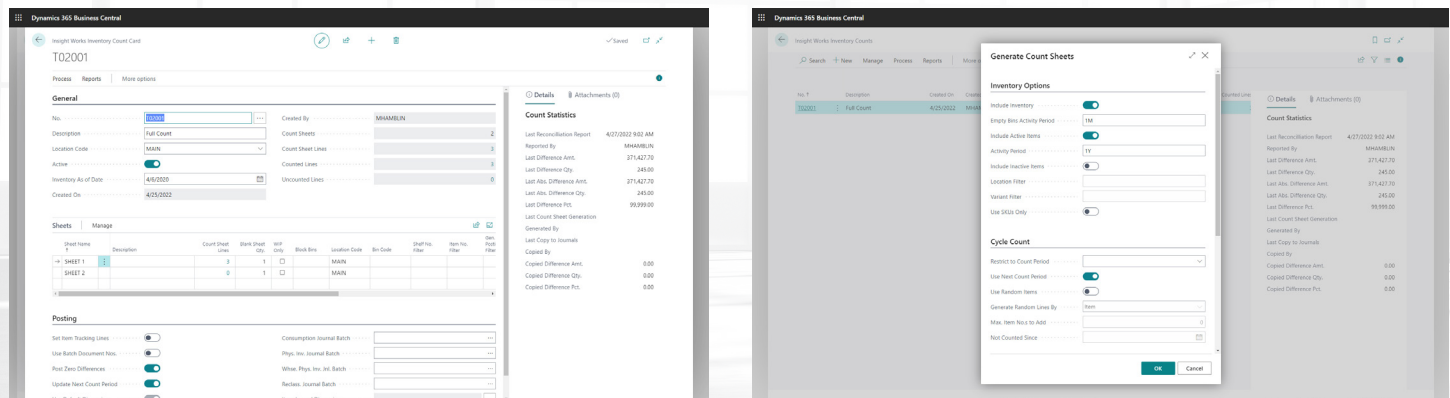

Recount Sheets:

Set up formal recounts during full physical counts or cycle counts based on a percentage, value, or quantity variance, with audit trails of the original count quantities and any subsequent recounts.

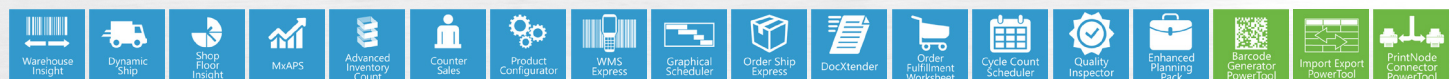

Journal Test Report:

Identify anything that may prevent posting, such as blocked items, missing item tracking, missing posting groups, etc., to ensure the data on the journal will post without multiple long, annoying retries.
