

Looking to modernise your telephony without replacing your PBX?

NFON SIP Trunk connects your existing phone systems to the cloud — enabling more flexibility, easier scalability and lower costs. No system switch required.

It's the smart way to future-proof your communication setup: secure, efficient and fully integrated.

What does NFON SIP Trunk include?

- **Full telephony features:** The features you need, always available
- **Block calls:** Block outgoing calls to selected destinations
- **Detect fraud:** Security is a priority. We'll monitor calls to prevent fraud on your platform
- **High availability:** For more extensive use, connect a second PBX. Incoming calls can be forwarded to ensure even distribution of the call load — this might be across different locations and makes work across teams more efficient
- **Backup:** Constant coverage through a backup system that works when PBX is unavailable
- **Flexible number routing:** Flexible allocation of telephone numbers without having to purchase new blocks. Numbers from one block can be assigned to different trunk sets, providing more control and lower costs
- **Self-service portals:** Everything you need at your fingertips. Feel confident setting up and managing SIP Trunks by yourself
- **Conference services:** Easily host audio conferences with up to 50 participants
- **Genesys Cloud/CCHub:** Allows PSTN connectivity, along with inbound and outbound calling for your contact centre
- **Microsoft Teams* Integration:** Connect Microsoft Teams* with PSTN and all the standard telephony features via Operator Connect or Direct Routing

Why businesses choose NFON SIP Trunk

Europe-wide scalability
with one product

Access exclusive cloud solutions
not available with other SIP trunks

Remain connected with on-premise systems

Enjoy cost-efficiency by unlocking the many benefits of the cloud

Seamless integration of telephony and unified communications through Microsoft Teams* integration

Favourable telephone tariffs

Several telephone systems can be **configured under one trunk set**

Assign phone numbers easily from one number block to different PBX systems with Number Assignment. No need to buy a separate number block for a different PBX

Optimised SIP trunk admin portal

We are certified with many PBX vendors

**Modernise without disruption.
Unlock full telephony
potential with NFON SIP Trunk.**
